TECHNICAL SKILLS

- JavaScript.
- HTML/CSS.
- Express, Node.js
- GIT/Github.
- React
- Postgresql, Supabase
- Ruby
- Ruby on Rails

SOFT SKILLS

- Problem solving
- Adaptable
- Teamwork
- Effective Communication
- Leadership
- Integrity
- Multi Tasking

EDUCATION

Digital Crafts, Houston — *Certification*

August 2021 - November 2021 -

Software engineering training course covering full-stack development including, but not limited to JavaScript, Python, Node.js, Postgresql, including an emphasis on React

PROJECTS

Project Name — *Lavish Auto*

This was our capstone group project, which incorporated the technologies we learned in the cohort. I helped with connecting the front and back ends for our sign up component. Created the redux data for our user actions. Helped style and set mock stripe checkout component. Deployed the app through Netlify and helped with debugging various issues throughout the app. Repository link is [Github](#) and url is <https://lavish-auto.netlify.app/>.

Project Name — *E Commerce*

One of my interests is collecting New Era 59/50 fitted hats so this was a React/Redux project using that idea, where I created a mock fitted hat aftermarket store. I also used JavaScript Styled components, actions and actions type to achieve this. At this point the project needs a bit more styling for it to be completed but the main point of this was to show my grasp of React and Redux concepts. Repository link is [Github](#) url to project is pending approval access from Github pages.
